Rating Definitions

Prime Power – Unlimited hours usage with an average load factor of 80% of the published Prime power over each 24 hours period. A 10% overload is available for 1 hour in every 12 hours of operation.

Standby power – Limited to 500 hours annual usage with an average load factor of 80% of the published Standby power rating over each 24 hours period. Up to 300 hours of annual usage may be run continuously. No overload is permitted on Standby power

Caution: The airflows shown in this table will provide acceptable cooling for an open power unit operating in ambient temperatures of up to 53 °C (127 °F) or 46 °C (114.8 °F) if a canopy is fitted. If the power unit is to be enclosed totally, a cooling test should be done to check that the engine cooling is acceptable. If there is insufficient cooling, contact Quantum Technical Service Department.
